Staff augmentation | Managed back office | AI agents & contextual AI | Workflow automation | Compliance & audit readiness

OVENTURE · UAE EXECUTIVE INTRODUCTION

Run critical work.
With people, AI and clear controls.

Oventure brings specialist teams and delivery partners together to run operations, build AI agents, automate work and prepare processes for audit.

ONE POINT OF COORDINATION

People · technology · operating discipline

01

Support your organisation

Start with a business problem. Explore the people, software and operating support that could help.

02

Explore a partnership

See where your market access, relationships or expertise could complement the capabilities here.

03

Discuss investment interest

If a capability or business interests you, we can bring the relevant people into a focused follow-up.

Pakistan-based delivery expertise. Working hours, data access and the named delivery partners are agreed for your project.

THE WORK WE CAN TAKE ON

Five capabilities around your operating priorities

Five complementary offers: clear outputs, named owners and a scope matched to your priorities.

01	**Staff augmentation**	Named specialists, agreed hours and reviewable work	Your lead directs added specialists
02	**Managed back office**	Completed work, quality samples and exception reports	An Oventure service lead manages the queue
03	**AI assistants & agents**	Working software, access controls, evaluations and run logs	A delivery lead builds it; your owner approves the controls
04	**Workflow automation**	Working integrations, retries, alerts and operating guides	A named owner monitors each workflow
05	**Compliance & audit readiness**	Approved SOPs, configured workflows, training material and an evidence index	Your quality or compliance owner approves requirements

Use one capability or combine several in one scoped workstream. Named delivery companies, software licences and responsibilities are agreed in the proposal.

ILLUSTRATIVE ENTERPRISE WORKFLOW

A supplier request becomes a reviewable decision

An operations team, an assistant, an agent and workflow rules can support the same process while your approver keeps the decision.

01 People collect the request and documents

→

02 The assistant retrieves the approved policy

→

03 A scoped agent prepares missing-item follow-ups

→

04 Automation routes the approval and exceptions

→

05 The reviewer decides; evidence is retained

Example only. Supplier activation, payments and other consequential actions require the agreed approval. No live systems are connected to this presentation.

AI AGENTS · CONTEXTUAL AI · AUTOMATION

AI agents that follow through on approved work.

For a supplier-onboarding process, these three approaches do different jobs. The agent can choose its next permitted step; a person retains the approval.

01

Contextual AI assistant

Find which supplier document is missing. Retrieve the approved policy and current record, then prepare an answer with source links.

02

Workflow automation

When a request arrives, create a ClickUp task and route it to the right reviewer using predefined rules.

03

AI agent

Work toward a complete supplier file: check missing items, draft a follow-up and choose the next allowed step. Pause for required approvals.

WHAT YOU RECEIVE

A working assistant or agent connected to approved sources, permitted-tool rules, evaluation cases, approval steps, run history and a handover guide. Start with one defined task and measure the result.

Illustrative example. We configure permitted tools and data, test expected and failure cases, and provide run logs and an operating guide. Permissions and consequential-action approvals are enforced outside the model.

COMPLIANCE READINESS · SOPS · TRAINING · EVIDENCE

Turn compliance requirements into everyday work.

Make an approved standard operating procedure (SOP) usable in ClickUp, Trello or an agreed system—with task checks, short training videos, approvals and audit evidence.

01 **Map the applicable requirements and gaps**

→

02 **Approve procedures, owners and version control**

→

03 **Configure tasks, evidence fields and approval gates**

→

04 **Add short training videos and competence checks**

→

05 **Review exceptions, evidence and corrective actions**

OPERATING PACKAGE

Control map · SOPs · task templates · short training videos · approval gates · evidence index · exception reporting

Explore the interactive control example

Readiness support covers selected requirements; it is not a certification or licence. Independent bodies or regulators decide approval. We assess platform limits and test controls against bypasses. Some approvals also require inspections, testing, capital or other criteria.

ILLUSTRATIVE CONTROL DESIGN

Ready for review means more than a ticked box

In this example, approval remains blocked until the prerequisites are complete. Changing one invalidates the sample approval.

EXAMPLE · SUPPLIER ONBOARDING

- ☑ Current SOP version approved
- ☐ Required records linked
- ☐ Role training and competence checked
- ☑ Accountable reviewer assigned

EXAMPLE EVIDENCE RECORD

Prerequisites still missing

2 / 4 checks complete

SOP-ONB-01 · version 3

Human approval: not yet given

Try the approval gate in the web deck

Target control design, not a live ClickUp or Trello integration. A task status alone does not prove compliance. Implementation must test permissions, manual/API bypasses, overrides, failures and evidence retention.

DESIGN FOR THE BUYER'S CONTROLS

Agree the data boundary before implementation

For a regulated buyer, start with a process map and sample data containing no real customer records. Confirm the contracting entity and applicable regulator before choosing the delivery model.

01

Data & access

Agree hosting location, remote support access, sub-processors, retention and permitted AI tools. UAE hosting alone does not settle cross-border access requirements.

02

Ownership & approval

The client retains its risk, compliance and internal-audit accountability. Overture can implement scoped workflows and evidence operations under the agreed controls.

03

Procurement & oversight

Prepare the scope, due-diligence pack, security review, service measures, escalation route and exit plan. Obtain required approvals before access and work begin.

For banks within the CBUAE regime, material outsourcing requires prior non-objection, and overseas confidential-data arrangements have specific requirements. Applicability must be checked for the actual entity and jurisdiction.

NAMED CAPABILITIES, WITH THEIR CONTEXT

Inspect the products and the work behind the offer

These examples belong to the named companies. They demonstrate relevant capabilities; the proposal confirms participation, licences, people and fit for your scope.

Published product capability

Sahl · compliance software

Its published platform describes policy, control, evidence and audit-room capabilities. A potential compliance layer to assess for the scoped process.

View published work

Company-reported deployment

NerdFlow · customer operations

Its published work includes AI guest support; it reports a HostBNB deployment under another brand serving 1,000+ properties.

View published work

Published product capability

Veyn.ai · support context

Email Copilot retrieves customer, order and support information to prepare replies for human review.

View published work

Published products & training

RedMarker Systems · assessment operations

Its published solutions connect question preparation, on-screen marking, review workflows and staff training for assessment teams.

View published work

220+	Enterprise clients · prior consultancy	$57M+	Raised by advised companies · prior roles	300+	Startups advised · prior roles

Prior team experience: 220+ enterprise clients through prior consultancy, 300+ startups advised and $57M+ raised by advised companies. These are distinct historical measures, not Oventure customer or funding totals.

ONE SCOPE · NAMED OWNERS · VISIBLE EVIDENCE

Make the first engagement easy to evaluate

Start with one process and a clear outcome. Your proposal names the deliverables, responsible people, tools, price and acceptance checks before work begins.

01 **Discovery: the problem, workload and intended outcome**

→

02 **Proposal: people, scope, tools, access and price**

→

03 **Implementation: configuration, training and tests**

→

04 **Review: service results, exceptions and acceptance**

→

05 **Expansion: a new scope only when the case is clear**

48–72 hours

Productive start after signing

2 weeks

Risk-free trial

7–10 business days

Team-member replacement

Before signing, confirm approvals, access and written trial payment/cancellation terms. Team commitments: productive work within 48–72 hours of signing, a two-week risk-free trial and replacement within 7–10 business days. These are not certification or regulatory-approval timelines.

START WITH WHAT INTERESTS YOU

One introduction. Several ways to work together.

Tell us what caught your attention. We will shape the next meeting around your interest, with the people best placed to explore it.

01

A client project

Where is work slowing down? Explore a team, a managed service or a software solution around the outcome you need.

02

A partnership

Where could we create value together? Explore shared customer needs, complementary expertise or market access.

03

Investment interest

Which capability or business interests you? Meet the relevant people first; explore the opportunity and possible structure together.

YOUR INTEREST → RELEVANT PEOPLE → A FOCUSED NEXT MEETING

You do not need to choose a route or investment structure now. Any later investment discussion will identify the relevant business and require its own diligence and agreed terms.

TURN INTEREST INTO A USEFUL NEXT MEETING

Your interest sets the agenda.

A focused follow-up should help both sides decide whether there is a worthwhile opportunity and what to explore next.

01

Clarify the opportunity

Share what interests you, the problem or opportunity you see, and any relevant timing. We will focus the discussion around that.

02

Bring the right people

We will identify the relevant delivery specialists, product team or founders and agree who should join the conversation.

03

Agree a useful next step

A workflow review, product demonstration, partnership discussion or company-specific investment exploration—whichever fits the interest.

PRIOR TEAM / VENTURE RELATIONSHIPS · NOT OVENTURE CUSTOMERS OR ENDORSEMENTS

techstars

Techstars · Aabshar

Google for Startups Accelerator

Google for Startups · Aabshar

NetSol · program leadership

DESCON · prior project delivery

The follow-up is exploratory. If there is a fit, we can then identify the appropriate business, people, responsibilities and commercial or investment structure.

LET'S EXPLORE WHAT FITS

Something caught your interest? Let's talk.

Tell us what stood out. We can arrange a focused meeting to explore a client project, partnership or investment opportunity. You do not need to decide the format first.

01

A client project

Share the work you want to improve and the outcome that matters. We will bring the relevant delivery expertise to the discussion.

02

A partnership

Share the market, relationships or capability you have in mind. We will explore where our strengths could work together.

03

Investment interest

Tell us which capability or business interests you. We will arrange a focused follow-up and explore the appropriate opportunity and structure together.

Start with what interests you.
